

Master's thesis in Biochemistry

The Research Institute of Molecular Pathology (IMP) in Vienna pursues world-class research in basic molecular biology. It is located at the Vienna BioCenter and largely sponsored by Boehringer Ingelheim. With over 200 scientists from 40 countries, the IMP is committed to scientific discovery of fundamental molecular and cellular mechanisms underlying complex biological phenomena.

The Peters lab has an open position for a Master's student; the lab uses a variety of biochemical and cell biology techniques to study the mechanisms of genome organization.

The successful candidate will carry out research in the field of chromosome biology and genome organization. He/she will be introduced to protein complex purification and will perform *in vitro* functional assays. He/she will be exposed to a variety of molecular techniques, including cloning, protein expression and biochemical characterization of recombinant protein complexes.

The ideal applicant should be highly motivated and have strong interest in biochemistry. Experience in protein purification would be an advantage. We offer an exciting research project, outstanding infrastructure and an excellent working environment. The position is available from 1st March 2019 and will remain open until filled. The successful candidate will receive a monthly stipend of €500 (a living allowance is also available for applicants from outside Vienna).

To apply please send a CV and cover letter to:

Dr. Jan-Michael Peters
